

Rock-tech Live Sound Training Course – Part 1

What is the Rock-tech Live Sound Course?

The Rock-tech Live Sound Training Course has been written by a dedicated team of live sound professionals, who have many years of experience working at all levels of the industry. It looks to address the core areas of competence, both technical and relational, required by an individual who is wanting to work in a live sound environment, and gives a broad understanding of the subject to the attendee. In addition to this, a significant section of the course deals with topics found only in church situations and focuses on creative and imaginative solutions to these unique challenges.

Who is the Rock-tech Live Sound Course for?

- Churches that value and want to develop their sound team.
- Individuals who want to extend their knowledge of sound engineering.
- Complete beginners, who are interested in sound engineering.
- Studio Engineers who would like to start using their skills in a live context.
- Church management and Pastors who would like a basic understanding of the challenges of sound engineering.

How does the Rock-tech Live Sound Course work?

The Rock-tech Live Sound Course is based on a comprehensive syllabus that can be taught in a number of ways. It has been specifically tailored for use in a church environment.

We typically offer the following options, but bespoke tailored courses are also available:

Option 1.

A single, full day course, looking at the basic principles of sound engineering and dealing with any questions from the team, bringing everyone to a basic level.

Option 2.

3 full days training with a minimum of two weeks between each day, giving an opportunity to cover a broader curriculum. This gives time for people to 'put into practice' what they have learnt and then ask our knowledgeable tutors questions at the next session.

We issue a certificate of Basic Live Sound Engineering for option 2.

Further Information

Location:

Normally our Tutor comes to your venue, but we also offer our own training facilities.

Standard Course Fees:

- | | |
|---------------|--|
| 1 Day course: | £75 per person, based on a minimum 6 trainees
Plus Tutor travel expenses (at 45p per mile)
This includes all course notes and certificates. |
| 3 Day course: | £200 per person, based on a minimum 6 trainees
Plus Tutor travel expenses (at 45p per mile)
This includes all course notes and certificates. |

We recommend that attendees are asked to pay a contribution (typically half) towards the fees as this helps them to value their training day.

Special Rates:

We offer a special 30% discount rate for churches and charities, so please contact us if you are entitled to this offer.

Client Requirements:

We expect the hosting venue to provide:

- A room and seating suitable for the training session.
- A white board or flipchart.
- Sound equipment for training purposes (please contact us to discuss these requirements)
- Basic refreshments and a simple midday meal (alternatively please ask attendees to bring their own lunch).
- If possible, a few musicians to practice on!

What other courses do we offer:

- Advanced Sound and System Engineering.
- Basic Rigging Skills.
- Lighting: Design, Rig, Focus and Program.
- Video: Projection and LED technologies.

Our Hire and Production Department also offer 'on the job' style work experience training if you would like to accompany us on an event.

Any questions?

We'll happily answer any questions you may have about the course. We are ready to help you develop and create the team you want. Simply call us on 01904 481700.
